

# GR Manager

Paperless and highly efficient processes in  
your global production network.

## ■ The Challenge:

Delayed entries in the ERP system, errors in entering important material data such as batch number, serial number, or lost or damaged documents. In goods receiving, a high processing speed is essential for a reliable material supply to your production. Manual data collection costs time, money, and nerves! These are the challenges faced by companies in the goods receiving department.

## ■ The Solution:

Use the mobile app GR Manager to post your incoming goods directly in SAP as soon as they arrive. Keep inventory up to date and significantly increase your logistics performance. Faster processes, fewer errors, timely bookings, predictive processing and effective management of your resources.

The GR Manager enables you to work in real time. The direct flow of information noticeably reduces the workload for employees and saves money. Data is posted directly in the ERP eliminating the need for manual transfers. Queries and interruptions to the process are also sustainably reduced. This helps your business work reliable and precisely.
